

ANTIVIRUS PODS BY VETROSPACE THAT KILL VIRUSES, CORONAVIRUS INCLUDED.

Vetrospace, a company from Finland, has developed a pod that kills viruses within the pod, including Coronavirus. These specialized pods have already been ordered by a number of hospitals within Finland.

By combining safe, cutting edge technologies, Vetrospace pods are capable of eliminating up to 99.9% of bacteria and viruses, fungi (molds and yeasts), VOCs and smells while Smart Clean-Air ventilation removes up to 99.9% of harmful particles from the air. Apart from exceptional hygiene, sound proofing levels of the spaces are extremely high.

Internationally patented Vetrospace pods offer ISO-7 cleanroom standards, and a level of protection never achieved before in modular space design. A wide application can be seen in both the Healthcare sector and the Commercial Interiors sector, as awareness of the effects of microbes at the workplace and in healthcare facilities grows, in light of the ongoing pandemic.
